23.1 Language Models

Formal languages, such as first-order logic, are precisely defined, as we saw in Chapter 8. A **grammar** defines the syntax of legal sentences and **semantic rules** define the meaning.

Natural languages, such as English or Chinese, cannot be so neatly characterized:

- Language judgments vary from person to person and time to time. Everyone agrees that "Not to be invited is sad" is a grammatical sentence of English, but people disagree on the grammaticality of "To be not invited is sad."
- Natural language is **ambiguous** ("He saw her duck" can mean either that she owns a waterfowl, or that she made a downwards evasive move) and **vague** ("That's great!" does not specify precisely how great it is, nor what it is).
- The mapping from symbols to objects is not formally defined. In first-order logic, two uses of the symbol "Richard" must refer to the same person, but in natural language two occurrences of the same word or phrase may refer to different things in the world.

If we can't make a definitive Boolean distinction between grammatical and ungrammatical strings, we can at least say how likely or unlikely each one is.

We define a **language model** as a probability distribution describing the likelihood of any string. Such a model should say that "Do I dare disturb the universe?" has a reasonable probability as a string of English, but "Universe dare the I disturb do?" is extremely unlikely.

Consider ChatGPT

- <https://chat.openai.com/>
- We'll circle back around.

Teaching

- Professional Goals
 - Explore Courses
 - Teaching Style / Pedagogy
 - Content
- Personal Goals
 - Move back home
 - Fresno – 2/12
 - Southeast Fresno – 3/22
 - (Fairgrounds area)
 - Care for Parents
 - Father: 12/06/29 - 06/12/12
 - Mother: 12/22/36 - 06/13/23
 - Sabbatical : 6/22 – 8/23

Teaching Style: Explored Engagement

- Education Changing
 - More choices than ever for learning content.
 - University should encourage personal growth.
 - Not just content acquisition.
 - University Social Connections Irreplaceable.
- Surgeon General Report
 - Social connections promote growth.
 - Virtual learning period difficult for many
 - Social Connections important for health.

EXTRA:

Two Points from Report

- **Humans are wired for social connection, but we've become more isolated over time**
 - Social connection is as essential to our long-term survival as food and water. But today, loneliness is more widespread than other major health issues in the U.S. Our epidemic of loneliness and isolation is a major public health concern.
- **Social connection is vital to community health and success**
 - Socially connected communities enjoy better population-level health. They are more prepared for - and resilient in the face - of disaster situations. They also experience greater economic prosperity and reduced levels of crime and violence.

Teaching Style / Pedagogy

- Interested in facilitating social connections
 - w / Computer Science community
 - w/ Classmates
- Encourage social connections w/ participation sharing.
 - Discussion Online and In-Person for sharing
- Social connections improve engagement.
- CHALLENGES:
 - Time

Teaching & Learning w/ Connections

- Many options for EXPLAINING Content
- Class organized for exploring content together

Wife Says Spouse Declared Spirit Conceived Child

A statement by the father that one of his children had been conceived by a spirit from Christ is the unusual charge contained in a divorce action filed in the superior court to-day by Ethel May Smith against James H. Smith, Fresnan.

Smith is accused of making other false statements concerning the parentage of their four children, according to his wife, who charges he said in the presence of the children, the oldest of whom is 16, that he was the father of but one of them. He accused her of improper relations with other men, the wife's complaint says.

Smith is quoted as having made the remark that the father of one of their children was none other than the parent of his wife. These remarks form the basis for the wife's charges of extreme cruelty. According to the complaint, she is about to bear a fifth child.

They were married in Fresno February 28th, 1906. They separated May 17th last.

The wife asks distribution of community property consisting of two lots and a four-room dwelling at 2217 California Avenue, together with alimony and custody of all the children. Attorneys Peckinpah and Carter prepared the complaint.

Fresno Bee May 22, 1966

Mrs. Ethel May Smith

Funeral services for Mrs. Ethel May Smith, 76, of 326 E. California Ave. will be held at 2:30 p.m. Tuesday in the John N. Lisle Chapel. Interment will be in Mountain View Cemetery.

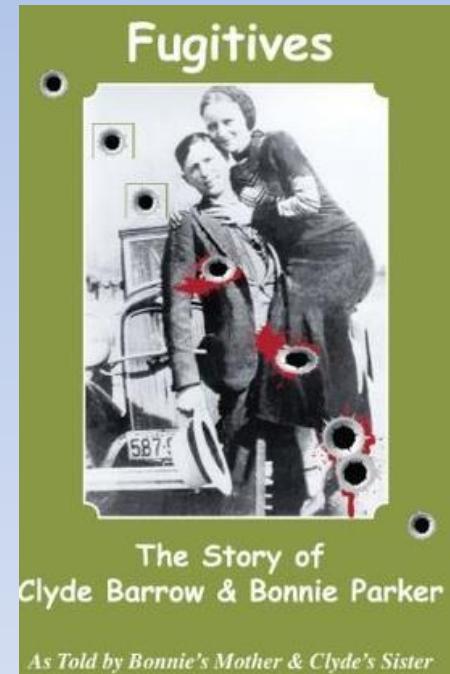

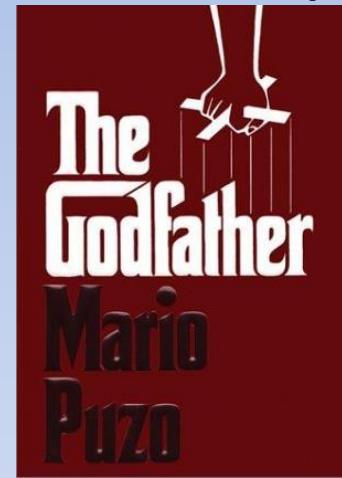

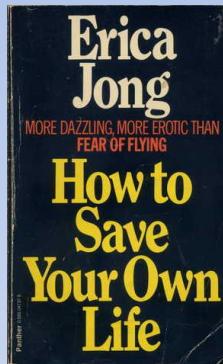

Mrs. Smith died yesterday in a local hospital after a long illness.

She had lived in Fresno County for 73 years. She was born in Boise, Idaho.

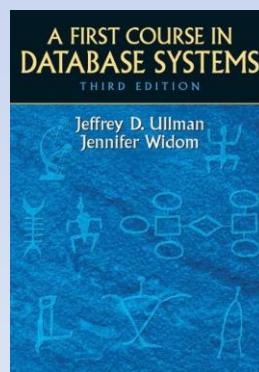

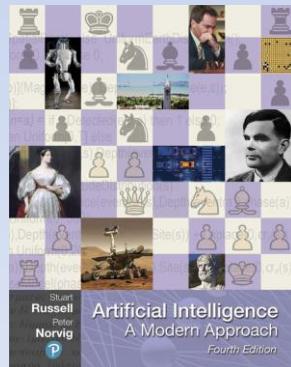

Survivors include two sons, Franklin and Raymond Smith; two daughters, Mrs. Viola Donato and Mrs. Atha Seedorf; a sister, Mrs. Leona Haag, all of Fresno; four grandchildren and five great-grandchildren.

Angel Falls via Willow Creek Trail is a 3.1 mile heavily trafficked loop trail located near Bass Lake, California that features a waterfall and is rated as moderate. The trail is primarily used for hiking, walking, nature trips, and bird watching and is best used from May until October. Dogs are also able to use this trail.

Hiking

Great hike. Started at 8:30 and finished at 11:30. We parked right after turning in and we were fine. When we got back there were so many other cars. We took it slow, enjoying stopping along the way to take in the water. We took the left trail up and went down the hill to the left when we reached the pully chair. Be sure to look out when you get in this part of the trail because there are great views of Bass Lake. There were dozens of people in the water on the way down.

If you make it to the fence at the top be sure to go to the end of it because you can climb out into the rocks and hike along the water to beautiful views.

No mosquitoes but the gnats are horrible.

Go early to avoid the swimming crowd.

It's a mostly shady hike with only a few spots in full sun.

Abstract

Decomposing a difficult problem into simpler subproblems is a classic problem solving technique. Unfortunately, the most difficult subproblems can be as difficult, if not more difficult, than the original problem. This is not an obstacle to problem solving if the difficult subproblems recur in other problems. If the difficult subproblems recur often, then its solution need only be learned once and reused. Steppingstone is a learning problem solver that decomposes a problem into simple and difficult-but-recurring subproblems. It solves the simple subproblems with an inexpensive constrained problem solver. To solve the difficult subproblems, Steppingstone uses an unconstrained problem solver. Once it solves a difficult subproblem, it uses the solution to generate a sequence of subgoals, or stepping-stones, that can be used by the constrained problem solver to solve this difficult subproblem when it occurs again. In this paper we provide analytical evidence for Steppingstone's capabilities as well as empirical results from our work with the domain of logic synthesis.

Bitwise Industries CEO Discusses Technology in Fresno

FRESNO STATE LIBRARY

Home » About » Events » News and Events

On Friday, Jan. 20, the *Friends of the Madden Library* present Jake A. Soberal speaking on the local technology industry growth. As CEO of Bitwise Industries, Soberal will examine how Bitwise promotes the incubation of new technology in Fresno. Since 2013, Bitwise has provided technology hubs and collaborative workspaces as well as custom software development through *Shiftit Technologies* and *Geekwise Academy*, a computer programming training program.

How to Fix America's Most Broken City: The Bitwise Story

- Friday, January 20, 2017
 - Reception: 6:00 p.m. Hors d'oeuvres and no-host beer/wine bar
 - Program: 6:45 p.m.
- This event is free and open to the public. Parking is free after 4 p.m.
- RSVP on eRsvp form using "LIBBIT"

"A simple idea between two people was able to spark a movement in a city where people said this type of progress was impossible," says Soberal. "Bitwise Industries was able to change the landscape of the technology scene in Fresno by bringing in a space for new technologies and business through education, collaboration and innovation."

Soberal is a graduate of Clovis High School and the University of North Carolina at Chapel Hill. He holds a law degree and practiced as an attorney before co-founding Bitwise in 2013. The *Friends of the Madden Library* sponsor, promote and raise funds for the programs and collections of the Library.

Tableau Public

- <https://public.tableau.com/app/profile/david.ruby>

The screenshot shows David Ruby's profile on Tableau Public. At the top, there is a navigation bar with links to various services like GitHub, LinkedIn, and Zoom. Below the bar, the Tableau Public logo and a "Create" button are visible. A banner at the top of the profile page encourages new users to read a step-by-step guide. The main area features a circular profile picture of David Ruby, his name, and his title as a Lecturer at Computer Science at Fresno, California, United States. There is also an "Edit Profile" button. Below this, social media icons for Twitter, LinkedIn, and a globe are present. The "Favorites" section shows 5 items, and there are buttons for "Create a Viz" and "Edit Profile". The "Vizzes" section displays four visualizations:

- A Viz About Nothing | #VOTD** by Lisa Trescott: A network graph titled "RELATIONSHIPS of SciFi". It has 171 nodes and 2 edges.
- Digital Gender Gap** by Kavin Kumar G: A world map showing internet users by gender.
- Black American Firsts and the Achievement Gap** by Alice McKnight: A complex visualization comparing Black American firsts across various fields.
- Back to the '80s** by Tristan Guillemin: A scatter plot of sci-fi movies from the 1980s.

Each visualization includes its title, author, a star rating, and the number of views.

Professional Certification

- Google Cloud

- <https://cloud.google.com/certification/machine-learning-engineer>
- Professional Machine Learning Engineer

The screenshot shows the Google Cloud website with the navigation bar at the top. Below the navigation, there's a sidebar on the left with links for the certification, including 'Exam overview', 'Exam guide', 'Certification home', 'Certification FAQs', 'Exam terms & conditions', 'Register', 'Certified directory', and 'Google Cloud training'. The main content area features the title 'Professional Machine Learning Engineer BETA' in large bold letters. A detailed description follows, stating that a Professional Machine Learning Engineer designs, builds, and productionizes ML models to solve business challenges using Google Cloud technologies. The role requires proficiency in model architecture, data pipeline interaction, and metrics interpretation, along with familiarity with application development, infrastructure management, data engineering, and security. Below this, a section titled 'What you'll learn' lists several competencies with green checkmarks: 'Frame ML problems', 'Architect ML solutions', 'Prepare and process data', 'Develop ML models', 'Automate & orchestrate ML pipelines', and 'Monitor, optimize, and maintain ML solutions'. At the bottom right, the word 'BETA' is visible.

The AWS Certified Machine Learning - Specialty certification is intended for individuals who perform a development or data science role. It validates a candidate's ability to design, implement, deploy, and maintain machine learning (ML) solutions for given business problems.

Abilities Validated by the Certification

- Select and justify the appropriate ML approach for a given business problem
- Identify appropriate AWS services to implement ML solutions
- Design and implement scalable, cost-optimized, reliable, and secure ML solutions

Sak'awa (clear water in Mayan), Dzalbay, Yucatán, Mexico

◀ More Activities

my grandfather (he had left it as an inheritance). The sak'awa is a very special cenote because when its dome fell, due to fate, I was left with a kind of island, which even has fine sand, like a beach ... spectacular. I did not enter that cenote as a child because at that time you could only enter by going down a tree, and it was dangerous for children. Now, that it has a ladder to go down, if I could do it ... and what things !. A spectacular and very emotional bike trip ... a return to the roots.

Photos

The map displays a cycling route across the Yucatán Peninsula. The route starts in Mérida, moves west through towns like Conkal, Motul, and Dzidzantún, then turns south through Izamal, Homún, and Huhí. It follows the coast through Chacala, Xcalacocoop, Chankom, Chikindzonot, and Chemax. The route then turns inland through Chan Cenote, Popolnah, Leona Vicario, Puerto Morelos, and Playa del Carmen. The map also shows the Rio Lagartos, El Cuyo, and Isla Mujeres. Major roads are labeled with numbers like 172, 176, 295, 307, 180, 1800, 2050, and 2060. A legend on the left includes icons for PRO, 3D, compass, zoom, and location.
